Kanamic Launches QR-Powered App: “Elderly Care Record Keeping Made Easy”

Kanamic Network Co., Ltd. (Headquarters: Shibuya-ku, Tokyo; Representative Director and President: Takuma Yamamoto; hereinafter the “Company”) has released “Elderly Care Record Keeping made Easy”, an iOS / Android application that capitalizes on QR code (*1) technology to assist home-visit elderly care providers with record keeping.

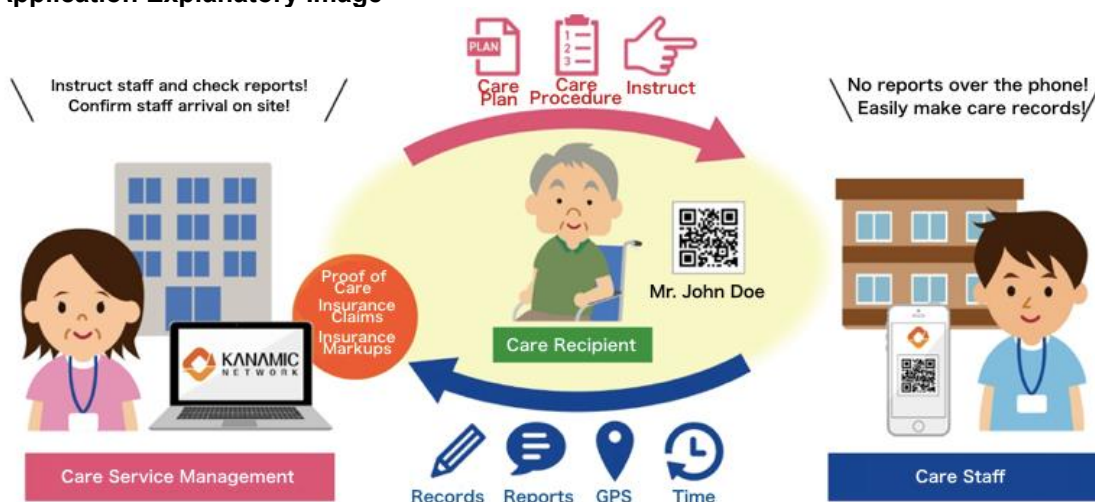

■ About the Application

“Elderly Care Record Keeping made Easy” allows elderly care providers to perform record keeping smoothly by simply scanning QR codes with their smartphone or tablet. And the application is easy to use regardless of the user’s IT proficiency.

The “Elderly Care Record Keeping made Easy” application allows care workers to view materials in Kanamic Network’s cloud system, such as care plans, care procedure documents, and instructions from managers (that impact insurance point markups) and allows care workers to generate reports, evaluations, and “Kanaeru-touch” home-visit nursing records. This makes it easier to conduct care services in accordance with the elderly care PDCA cycle.

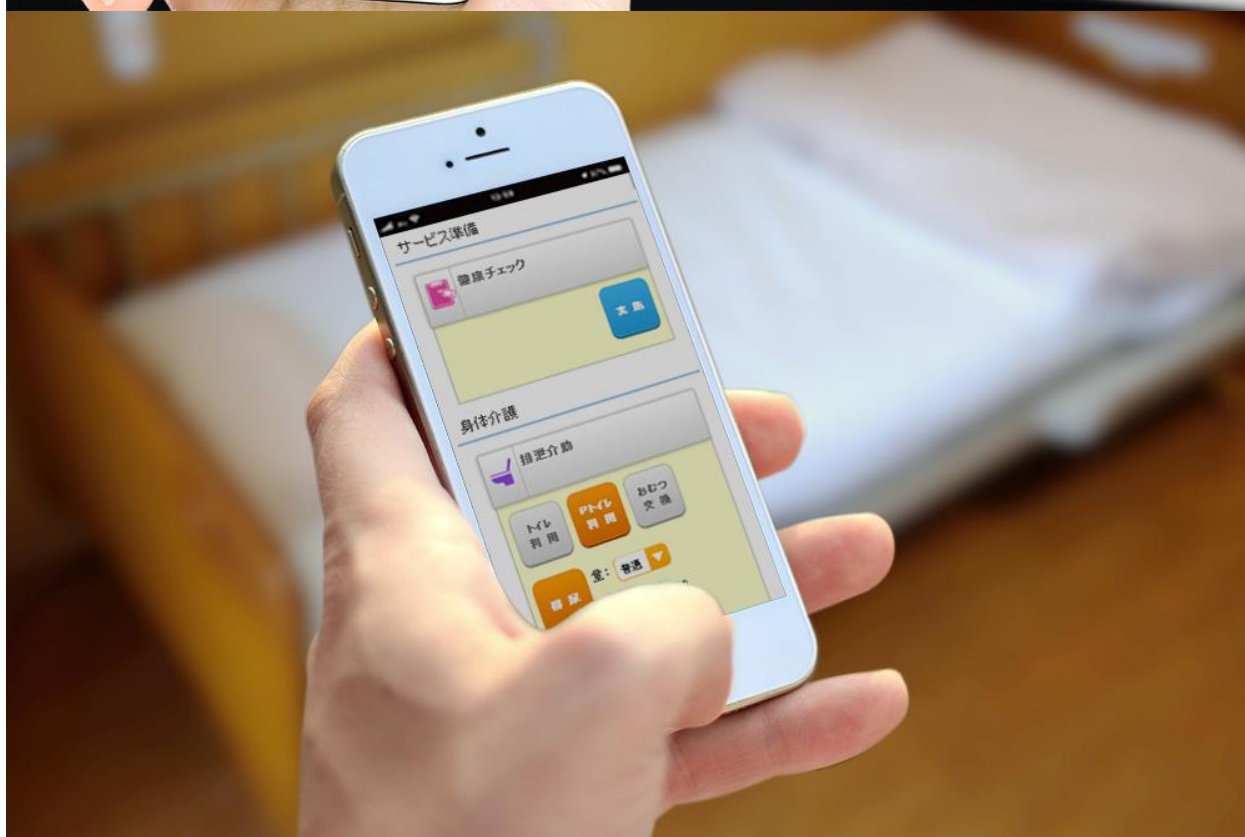

Furthermore, in addition to the elderly care record keeping function, this application is complete with a GPS-powered function allowing staff to evidence their arrival at care recipient homes, a web-conferencing function, and a chat function. These functions help streamline the complex workflow on the home-visit elderly care front lines amid a lack of face-to-face interaction between care staff and managers. This application is, therefore, an ideal tool for implementing telework within the elderly care industry.

■ About “Kanamic Cloud Service”

The “Kanamic Cloud Service is a “regional communication” cloud service that contributes to the realization of the “community comprehensive care system” that our super-aged society requires by making multidisciplinary communication among local governments, medical associations, and elderly care service providers possible. The Company’s lineup includes an information sharing system for the purpose of facilitating communication among interdisciplinary professionals as well as a system for elderly care service provider operations.
