\* Ichigo Green Infrastructure Investment Corporation (“Ichigo Green,” 9282)

July Ichigo and Ichigo Green solar power generation was 13,151,027kWh, 18% below forecast, due to the lowest number of July productive daylight hours since the Japan Meteorological Agency began recording statistics in 1946.<sup>2</sup> However, on a year-on-year basis, power generation increased 9% due to bringing online 6 new power plants since last July.

<sup>1</sup> CO2 reduction is calculated as 0.66kg CO2 per kWh.

<sup>2</sup> Forecast power generation is a 50% probability mean annual production forecast (P50 forecast), calculated by an independent, third-party technical consulting firm, that serves as the base forecast for each solar power plant’s operating plan.

Note: In addition to its own solar power plants, Ichigo manages 15 plants owned by Ichigo Green. Data for each of these Ichigo Green plants are disclosed in Ichigo Green's monthly release "Solar Power Generation and CO2 Reduction Data" announced today at [www.ichigo-green.co.jp/en](http://www.ichigo-green.co.jp/en).

Ichigo also discloses realtime solar power production and CO2 reduction data for each Ichigo and Ichigo Green solar power plant at [www.ichigo.gr.jp/en/eco](http://www.ichigo.gr.jp/en/eco).
