August solar power generation was 3,633,464kWh, 6% above forecast, due to a record high number of productive daylight hours across Japan.

¹ Forecast Power Generation is a 50% probability mean annual production forecast (P50 forecast), calculated by an independent, third-party technical consulting firm, that serves as the base forecast for each solar power plant’s operating plan.

² CO2 reduction is calculated as 0.66kg CO2 per kWh.
