Due to a relatively low monthly sunshine duration at several power plants, entire power generation for December 2020 had reached to 9,027,122kWh, which is 1.4% lower than the estimated electricity generation on the basis of the expected amounts of electricity generation in the 50th percentiles of probability of exceedance.

(Note1) The estimated electricity generation is the total of the expected amounts of electricity generation in the 50th percentile of probability of exceedance calculated by a third party on the basis of the database for hourly solar radiation for a year and others.

(Note2) CO₂ reduction is calculated as based on adjusted emission coefficient by electric power companies. For more details, please refer to the link (Japanese): <https://www.env.go.jp/press/files/jp/114735.pdf>
