December solar power generation was 1,818,512kWh, 8% below forecast due to the lowest number of December productive daylight hours in Okinawa since the Japan Meteorological Agency began recording statistics in 1946.

[1] Forecast Power Generation is a 50% probability mean annual production forecast (P50 forecast), calculated by an independent, third-party technical consulting firm, that serves as the base forecast for each solar power plant's operating plan.
[2] CO2 reduction is calculated as 0.66kg CO2 per kWh.
