#### 2. Reasons for the Differences

The Company expects both domestic and overseas sales in the 1<sup>st</sup> quarter of FY2021 to increase significantly. Demand for certain products such as Physiological Measuring Equipment has recovered from the same period of the previous fiscal year, when the number of testing and surgical procedures decreased due to the COVID-19 pandemic. In Japan, sales of Patient Monitors showed strong growth, as the Government's supplementary budget has continued to support demand in healthcare systems. Internationally, sales of Patient Monitors also increased favorably, thanks to receiving large orders in the U.S. as well as strong demand in India and Latin America due to the resurgence of COVID-19.

Income is also expected to increase significantly compared to the same period of the previous fiscal year, due to the positive effect of increased sales and higher gross profit margin.

Forecasts for the full-year and the 1<sup>st</sup> half of FY2021 are currently under review and will be released at the time of the announcement of the 1<sup>st</sup> quarter of FY2021 results scheduled on August 4, 2021.
