Impact from lost work due to production cut in automobiles

- A shortage in components caused by the lockdown in some ASEAN countries and the global shortage of semiconductors led to production adjustment in the automotive industry. However, due to a strong final demand for automobiles, automakers have dealt the issue with temporary shutdown or transfer of working days.
- The working hours such as overtime hours slightly decreased but the number of workers has not been reduced.
- Favorable orders for dispatch workers have continued and the number of dispatch workers in the automotive sector has increased due to the tight personnel demand in production processes.
