

Accelerating Innovation and Collaboration for the Next Stage

November 8, 2013

Smart Life & Smart Work in the Next Stage

- ICT as an Enabler

Transportation

Intelligent Transportation Systems, Quick Charging

Environment

Smart Housing / Smart Buildings, Demand Response

Health Care

Telemedicine, Regional Medical Collaboration

Home

Entertainment

4K / 8K, Ultra High Definition Video on Demand

Tourism

Multilingualization, Barrier-free

Stadiums

Highly Realistic / Ultra High Definition Video, Public Viewing

Optimal Navigation

Traffic congestion mitigation
(Best route guidance),
Multilingualization, Barrier-free

Highly Realistic / Ultra High Definition Video

Multi-angle / Multi-view, Time shift

Energy Control

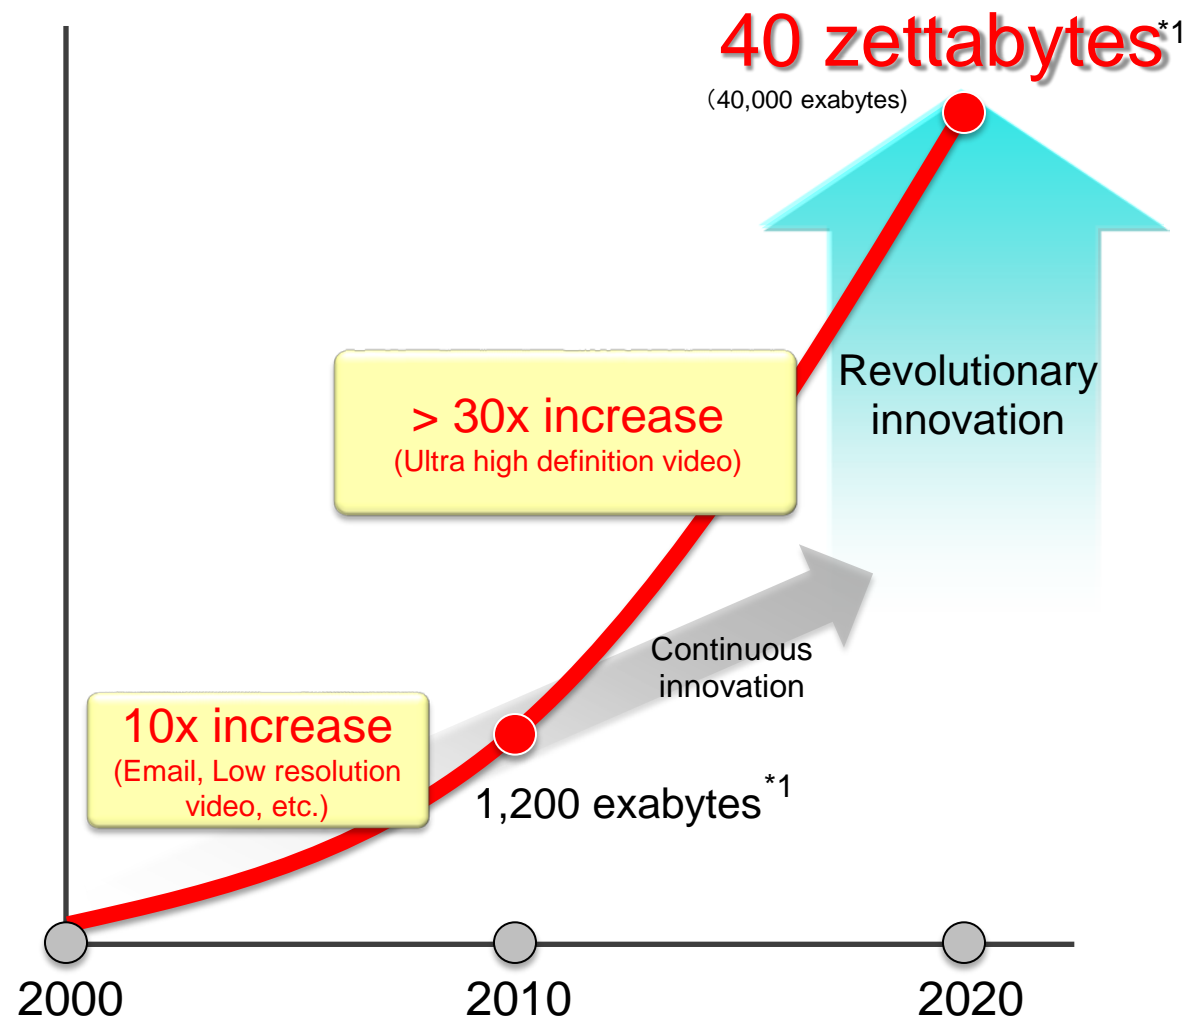

Heat island mitigation,
Electric energy projections

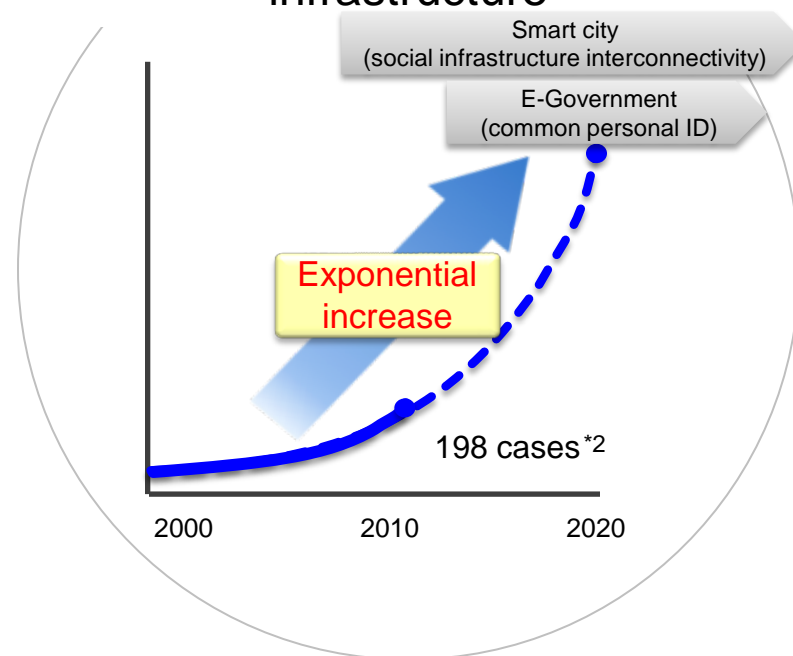

Most advanced Internet access infrastructure in the world by
the best mix of wireless (including Wi-Fi) and fiber-based communications

Changes in ICT Environment

Rapid increase in the global amount of information data

Cyber attacks on social infrastructure

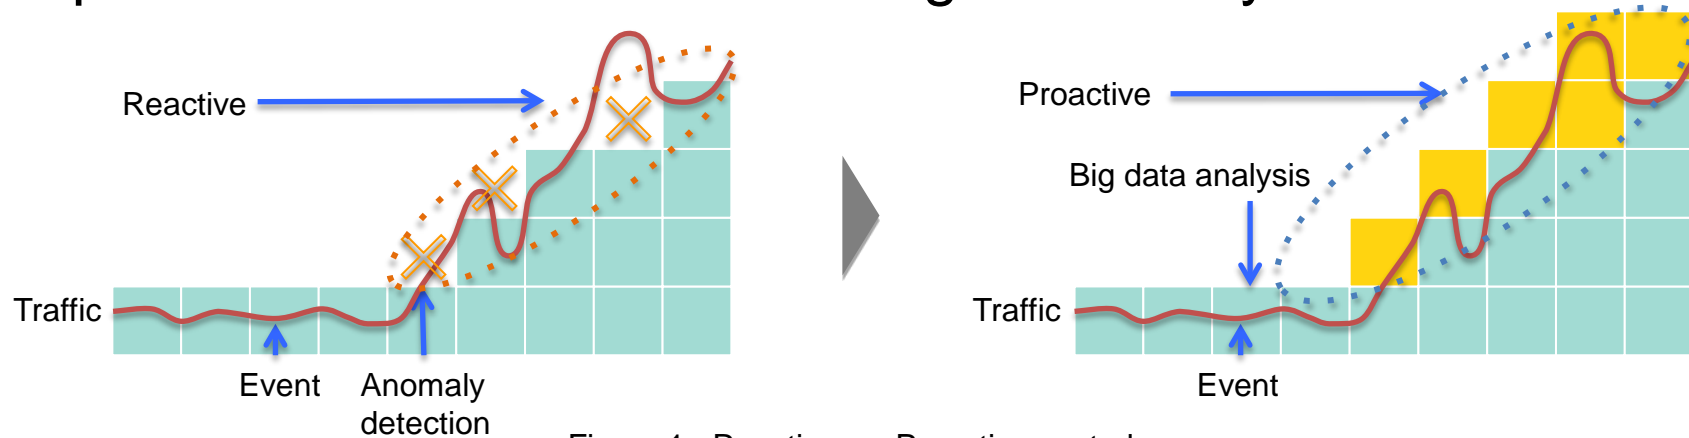

*1 : According to the IDC White Paper, THE DIGITAL UNIVERSE IN 2020: Big Data, Bigger Digital Shadows, and Biggest Growth in the Far East, Sponsored by EMC Corporation, December 2012, global information data usage was 130 EB in 2005, 1,227 EB in 2010 and is predicted to be 40,026 EB in 2020.

*2 : According to U.S. Department of Homeland Security "ICS-CERT Incident Response Summary Report 2009-2011", the number of social infrastructure cyber attacks in the U.S. in 2010 and 2011 were 41 and 198, respectively

Key Challenges – Network Control (1) **NTT**

- From reactive controls based on actual situation to proactive controls based on big data analysis

Issues

- Explosive increase in the number of data sessions caused by rapid traffic increase (sensors etc.)**
 - Congestion of backbone traffic caused by massive, individual processing (possibility of connectivity loss)
- Unexpected bursts of traffic during emergencies**
 - Ineffectiveness with reactive resource controls (possibility of connectivity loss)

Challenges

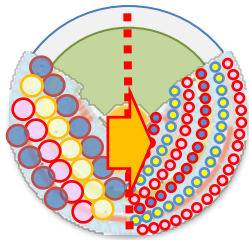

- Proactively controllable cloud services (Software-Defined Everything) <Figure 1>**
 - APM ^{*1} utilizing big data
 - Global SDN^{*2}
- Edge computing**
 - Wide-area and real-time big data processing
 - Device's CPU offload

*1 : Application Performance Management

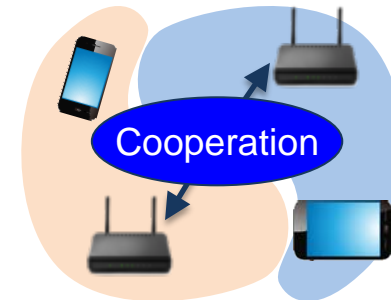

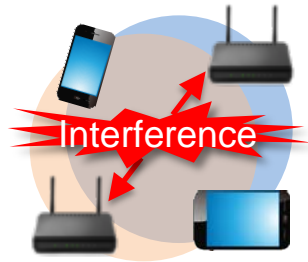

*2 : Software Defined Network

Key Challenges – Network Control (2) **NTT**

- From hardware-intensive to software-defined efficient network controls

<Figure 1> Increased density of Wi-Fi base stations

<Figure 2> Dynamic cells

Issues

- Increase in connected device users at stadiums etc.**
 - Wi-Fi frequency interference caused by increase in the number of access points <Figure 1> (lower speed)
- Simultaneous massive access to high-definition videos**
 - Resource shortage of delivery servers and backbone network (difficulty in viewing)

Challenges

- Interference evasion using dynamic cell based on software controls <Figure 2>**
 - Cooperative wireless LAN^{*1}
 - Simultaneous transmission for high efficiency wireless LAN
- Improvement in data transmission efficiency with reliable multicast^{*2} etc.**
 - Next generation high compression technology (HEVC^{*3})
 - Interactive panorama video delivery system

^{*1} : Technology that prevents throughput loss by the collaboration of multiple access points ^{*2} : High quality simultaneous broadcasting technology that prevents packet loss. ^{*3} : High Efficiency Video Coding

Key Challenges – Integrated Security **NTT**

- Realization of integrated security (Applications x Clouds x Devices) through world-leading Technology x Operation (global collaboration)

Issues

- Explosive increase and sophistication of global-scale cyber attacks**
 - Difficulty in individual responses by carriers / ISPs
 - Limitations to reactive security countermeasures
- Increase in security threats to clouds and new devices such as smartphones and sensors**
 - Ineffectiveness with on-premise countermeasures centered on PCs and servers

Challenges

- Proactive security countermeasures**
 - SIEM engine (for large-scale and/or unknown cyber attacks)
 - Data security optimized for cloud environment (Secure dispersion/computation, intelligent encryption)
- Security operations enhancement**
 - Global security cooperation with telecom-carriers, ISPs and security vendors
 - Security for smartphones, sensors and wearable devices etc.

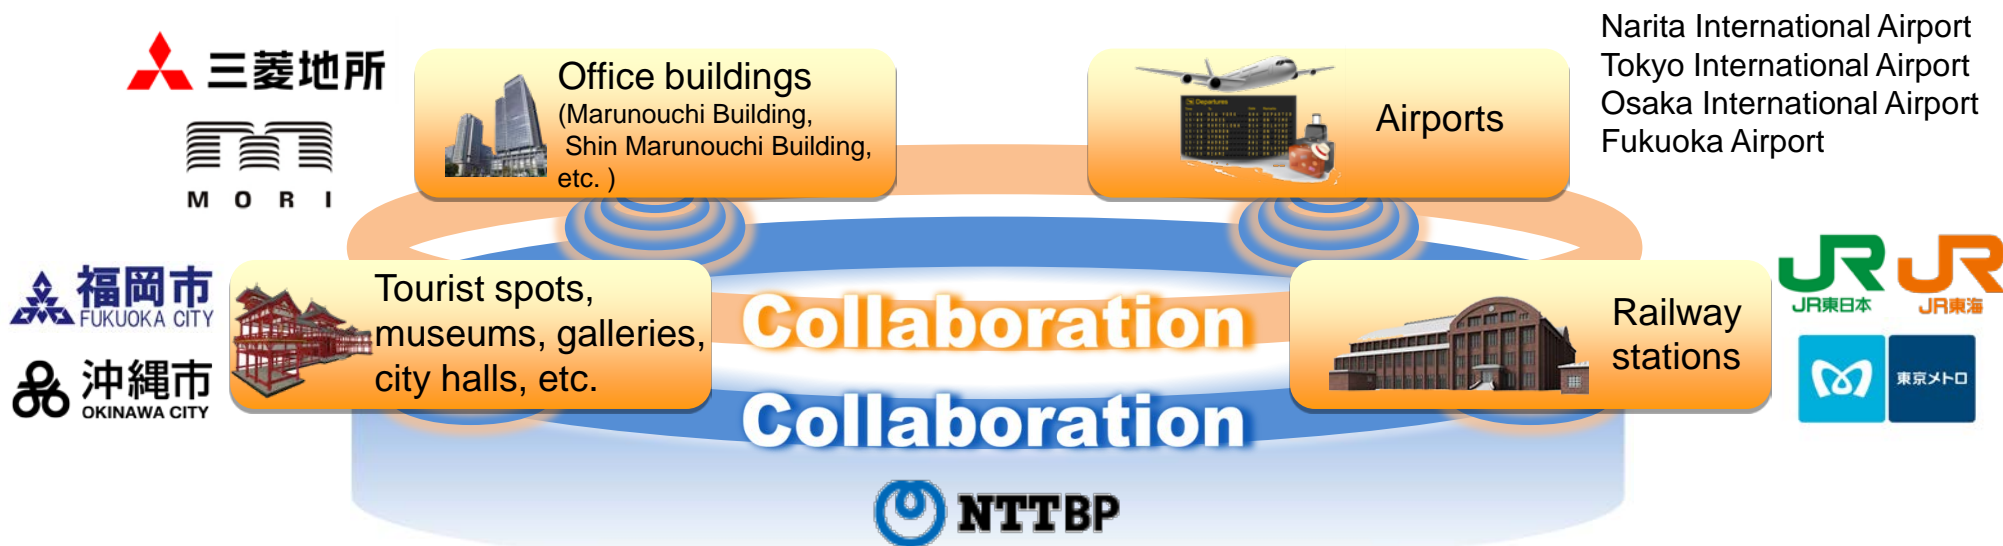

Collaboration for Smart Life & Smart Work **NTT**

Case of Collaboration: Japan Connected-free Wi-Fi

- Launch of “Japan Connected-free Wi-Fi”
 - interworking the open Wi-Fi services provided by corporations and local governments

Next Value Partner
