FY18/6 H1	625	
FY17/6	1,158	

#### Notes:

- 1. Ichigo Green executed a two-for-one stock split on January 1, 2018 (record date: December 31, 2017). Net Income per Share and FFO per Share are thus calculated on a post-stock split basis.
- 2. Funds from Operations (FFO)

FY 18/6 H1 FFO per Share: JPY 3,882 FY 17/6 FFO per Share: JPY 4,305

FFO per Share is calculated per the following:

FFO per Share = (Net Income + Depreciation + Amortization of Expenses Related to the Establishment of Ichigo Green + Amortization of Share Issuance Expenses + Amortization of Start-up Expenses + Loss on Disposal of Fixed Assets + Liability for Asset Retirement Obligation  $\pm$  Loss/Gain on Sales  $\pm$  Extraordinary Loss/Profit) / Total Shares Outstanding

- 3. While the FY17/6 period ran from October 1, 2016 to June 30, 2017 (273 days), Ichigo Green's actual operating timeframe during the period was from December 1, 2016, the day it acquired its first power plants, to June 30, 2017 (212 days).
- 4. Net Income per Share is based on the average number of shares outstanding during the period (post-stock split 81,406 shares). Net Income per Share during the actual operating timeframe was JPY 918, which is based on the average number of shares outstanding during that timeframe (post-stock split 102,658 shares).
- 5. Because FY17/6 was a 9-month fiscal period, year-on-year changes for Operating Revenue, Operating Profit, Recurring Profit, and Net Income are not shown.

### (2) Assets and Equity

Note: Ichigo Green executed a two-for-one stock split on January 1, 2018 (record date: December 31, 2017). Net Assets per Share is thus calculated on a post-stock split basis.

### (3) Cash Flow

### 2. FY18/6 Forecast (July 1, 2017 to June 30, 2018)

(JPY million; year-on-year change)

	Operating Revenue	Change	Operating Profit	Change	Recurring Profit	Change	Net Income	Change

	Dividend per Share (excluding DEE) (JPY)	DEE per Share (JPY)	Dividend per Share (JPY)
FY18/6	1,410	2,180	3,590

DEE = Dividend in Excess of Earnings. The DEE is paid from Ichigo Green's solar power production revenues (which Ichigo Green receives in cash) that are not treated as income under Japanese tax, because they are offset by non-cash depreciation expenses.

#### Notes:

- 1. Forecast FY18/6 Net Income per Share is JPY 1,424.
- 2. Ichigo Green did not have a FY17/6 Half-Year earnings period, so no year-on-year change is shown for the Half-Year forecast.
- 3. The actual operating timeframe for FY17/6 was only nine months (from October 1, 2016 to June 30, 2017), so no year-on-year change is shown for the FY18/6 forecast.
- 4. It is Ichigo Green's general policy to pay a DEE equivalent to c. 40% of annual depreciation expenses, subject to the dividend not adversely affecting Ichigo Green's financial standing.

DEE = Dividend in Excess of Earnings. The DEE is paid from Ichigo Green's solar power production revenues (which Ichigo Green receives in cash) that are not treated as income under Japanese tax, because they are offset by non-cash depreciation expenses.

#### Note:

Ichigo Green has an annual fiscal year running from July to June. Because there is no regulatory framework in Japan for Investment Corporations to pay dividends at half-year, Ichigo Green therefore pays an annual dividend once a year. The annual dividend results both in lower administrative costs and a dividend that is not impacted by seasonal changes in solar power generation (as a semi-annual dividend would be).

# Preconditions for the FY18/6 Earnings Forecast

	Preconditions
Period	FY18/6: July 1, 2017 – June 30, 2018 (365 days)
Number of Shares	• 102,966 shares issued and outstanding as of today, with no additional new share issuance through FY18/6
Number of Power Plants	• 15 power plants
Operating Revenue	<ul> <li>Power production revenue is based on the annual P50 power production forecast of operating power plants.</li> <li>Specifically, power production revenue is calculated by adding base revenue (electricity sales revenue based on annual P85 production forecast minus forecast operating expenses) to actual power production revenue (electricity sales revenue based on the annual P50 production forecast minus base revenue and forecast operating expenses). Power production revenue assumes that there is no suspension of renewable energy supply without compensation through FY18/6.</li> <li>Forecast power generation is a third-party, 50% probability mean annual production forecast (P50 forecast) that serves as the base forecast for each solar power plant's operating plan. The P85 annual production is a third-party, 85% probability mean annual production forecast. P85-based electricity sales revenue is the assumed electricity sales revenue calculated by multiplying the annual P85 production forecast by the FIT (Feed-In Tariff) for each plant.</li> <li>Renewable energy plant operation and maintenance expenses (including fees paid to maintenance service providers and repair costs) are the total of operator fees, rent paid, insurance premiums, management costs (including administration and tax fees), property, city planning, and consumption taxes, and other expenses related to the power generation business, renewable energy plants, and site leases.</li> <li>Maintenance expenses are as estimated by Ichigo Investment Advisors, the asset management company of Ichigo Green, based on third party reports. However, actual expenses for the period could differ significantly from these forecast amounts for reasons including the variability of maintenance and repair expenses, one-time costs due to unexpected maintenance needs, etc.</li> <li>Actual production is calculated by multiplying the annual P50 production forecast by the F1T for each plant. The annual P50 production is a third-party, 50% probability mean annual production</li></ul>

Operating Expenses	<ul> <li>Per the above, power plant operation and management expenses are deducted from power production revenue, and therefore are not part of Ichigo Green's operating expenses.</li> <li>Property and city planning taxes and other operating expenses, excluding depreciation, are calculated based on historical data and information provided by the previous power plant owner(s), adjusted for anticipated expense variations.</li> <li>While property and city planning taxes with respect to the acquisition and sale of renewable energy plants are, in general, pro-rated between the previous owner and the buyer based on period of ownership and paid at the time of acquisition, because Ichigo Green included such estimated taxes in its acquisition cost, it will not recognize these taxes as operating expenses in calendar year 2017 with respect to the 2 power plants it acquired on July 3, 2017. Owners of renewable energy plants are generally charged a 1.4% property (depreciable asset tax) tax rate on the assessment value of their plants. However, for certain approved renewable energy plants newly acquired before March 31, 2016, the assessment value used in calculating such property tax is reduced to two-thirds for three fiscal years following acquisition. Because this reduction in assessment value applies to the 15 power plants Ichigo Green owned as of February 14, 2018, the property tax is reduced by JPY 33 million to JPY 96 million for FY18/6.</li> <li>Depreciation (including incidental costs) is calculated using the straight-line method,</li> </ul>
Non-Operating Expenses	<ul> <li>and is forecast to be JPY 635 million for FY18/6.</li> <li>Ichigo Green plans to amortize expenses associated with its December 2016 Tokyo Stock Exchange (TSE) listing and new share issuance for 36 months and expenses for the establishment of Ichigo Green for 60 months, using the straight-line method. Ichigo Green anticipates such expenses to be JPY 34 million for FY18/6.</li> <li>Interest expenses and other borrowing-related expenses of JPY 80 million is anticipated for FY18/6.</li> </ul>
Loans	<ul> <li>Ichigo Green assumes outstanding debt of JPY 7.160 billion as of the end of FY18/6.</li> <li>Loan-to-Value (LTV) as of the end of FY18/6 is anticipated at 58.6%. LTV is calculated per the following:</li> <li>LTV = Total interest-bearing debt / total assets</li> </ul>
Dividend (excluding DEE)	<ul> <li>The dividend forecast assumes that dividends will comply with the dividend policy stipulated in Ichigo Green's Articles of Incorporation.</li> <li>The dividend is subject to change due to factors such as power plant operator turnover, changes in power production revenue, and unexpected maintenance and repair costs and other expenses.</li> </ul>
Dividend in Excess of Earnings (DEE)	<ul> <li>Ichigo Green sets its DEE based on its Articles of Incorporation and dividend policy set forth in Ichigo Investment Advisors' internal Operating Guidelines.</li> <li>It is Ichigo Green's general policy to pay a cash DEE equivalent to c. 40% of annual depreciation expenses, subject to the dividend not adversely affecting Ichigo Green's financial standing. The policy is based upon a) such dividend not affecting Ichigo Green's long-term maintenance policy, taking into consideration planned capital expenditure for each fiscal year, and b) a certain amount of retained cash is necessary to cover items such as acquisition of new power plants, maintenance of existing power plants, working capital needs, and loan repayments.</li> <li>Ichigo Green expects to pay a DEE equivalent to 35.3% of annual depreciation expense for FY18/6. The Total DEE is expected to be JPY 224 million.</li> </ul>

Other	• This forecast assumes that there are no material revisions to laws and regulations, the tax system, accounting standards, listing rules of the Tokyo Stock Exchange, and rules of the Investment Trusts Association, Japan, and no material changes in the state of the economy and real estate market conditions.

<sup>1</sup> Acquisition Price excludes incidental expenses such as property, city planning, and consumption taxes.

- <sup>2</sup> Appraisal Value is a median calculated pursuant to Ichigo Green's Articles of Incorporation (Article 35, Paragraph 2, Item 1) and using land and power plant appraisal values provided by PwC Sustainability LLC. The Appraisal Values of E-01 to E-13 (acquired on December 1, 2016) are as of June 30, 2017, and that of E-14 and E-15 (acquired on July 3, 2017) are as of May 31, 2017, but since those dates there have been no significant changes in the power plants' valuations nor in relevant market indices, so they are believed to be current and appropriate.
- <sup>3</sup> The top row of the Appraisal Value Breakdown column shows the Plant Appraisal Value, calculated as the difference between the Appraisal Value described in footnote 2 above and the corresponding Real Estate Appraisal Value in reports produced by Daiwa Real Estate Appraisal. Values in the second row show the Real Estate appraisal value by Daiwa Real Estate Appraisal. The appraisal date for E-11 is June 30, 2017 and that for E-14 is May 31, 2017, but since those dates there have been no significant changes in the power plants' valuations nor in relevant market indices, so they are believed to be current and appropriate.
- <sup>4</sup> The top row of the Book Value column shows the book value of the solar power plant and the bottom row shows that of the underlying land on December 31, 2017.
