* Ichigo Green Infrastructure Investment Corporation (“Ichigo Green,” 9282)

Explanation

April Ichigo and Ichigo Green solar power generation was 14,224,583kWh, 7% above forecast and a 117% increase year-on-year. Power generation came in above forecast due to above-average productive daylight hours generated by a high pressure system spanning the Pacific Ocean side of eastern Japan to Okinawa.²

¹ CO2 reduction is calculated as 0.66kg CO2 per kWh.

² Forecast power generation is a third-party, 50% probability mean annual production forecast (P50 forecast) that serves as the base forecast for each solar power plant’s operating plan.

Note: Ichigo sold two solar power plants to Ichigo Green on July 3, 2017. Ichigo also launched the Ichigo Showamura Ogoose ECO Power Plant (annual forecast power generation: 55,427,000 kWh), the Tokyo region's largest solar power plant, on September 2, 2017.

Detailed production data for each Ichigo and Ichigo Green solar power plant is available on the website of Ichigo ECO Energy: www.ichigo.gr.jp/en/eco
