**Initiation of Cohort 2 in Clinical Trials of
RBM-007 for Treatment of Exudative Age-related Macular Degeneration**

We are pleased to announce that first patient of Cohort 2 has been enrolled and treated with RBM-007 for our phase I/IIa trial for the treatment of exudative age-related macular degeneration (AMD) in the United States. Upon completion of the RBM-007 injection by all 3 subjects in Cohort 1, the external safety review team assessed them and recommended to proceed to Cohort 2 (the cohort with next dose) since no safety concerns were raised in any of the Cohort 1 subjects.

This PI/IIa trial is an open label, non-controlled, dose-escalating study assessing mainly the safety and tolerability of a single intravitreal injection of RBM-007 in approximately nine subjects.

See ClinicalTrials.gov for more information.
