DIGITAL HEARTS HOLDINGS Co., Ltd.

LogiGear Group announces collaboration with Pasona Tech to start new services that support the introduction of SAP S/4HANA®, an integrated ERP system
Vietnam-based operations will optimize installation costs and advance the use of automation tools

In April 2020, DIGITAL HEARTS HOLDINGS Co., Ltd.'s subsidiary, LOGIGEAR JAPAN CORPORATION, LOGIGEAR CORPORATION and LOGIGEAR VIETNAM CO., LTD. (hereinafter referred to as "LogiGear Group") will collaborate with Pasona Tech, Inc. (hereinafter referred to as "Pasona Tech") to provide new services to support the introduction of SAP S/4HANA®; SAP's integrated ERP system.

SAP® ERP, SAP's integrated ERP system, is a product that has high market share worldwide, and has also been implemented by many companies in Japan. In recent years, more companies are moving to its successor product, SAP S/4HANA®, due to the increase in data volume driven by Internet-of-Things (IoT) technology and the limitations around extending legacy systems. In many cases, SAP® ERP has not only been customized but has also been integrated into sister company systems. As a result, the migration requires a great deal of time and human resources. Additionally, there is a shortage of SAP engineers in Japan that can handle the migration; compounding the issues around cost and schedule.

In order to solve these problems, LogiGear Group decided to work with Pasona Tech to provide a one-stop shop for SAP S/4HANA® support services. By combining the Vietnamese engineering talent and the technologies provided by both companies, the companies will provide services around the development, introduction, maintenance and operation of SAP S/4HANA®.

In this service, Pasona Tech's experienced engineers will be in charge of development to enable swift system deployment. The LogiGear Group will be responsible for all the processes around system testing, given its long history around software testing. By combining the respective strengths of the two companies, they look to significantly improve the quality of the core operational systems. Finally, all of these activities will be carried out at the newly established Vietnam SAP Centre by Pasona Tech, and will utilize LogiGear Group's unique automation tool, "TestArchitect", in the test process; resulting in a reduction in installation costs of SAP S/4HANA®. By expanding its partnerships with companies that have expertise around the process of requirements definition, design, maintenance, and operation of SAP S/4HANA®, the LogiGear Group plans to continuously improve its software testing services in this market.
