1. Qualitative Information on Quarterly Financial Results for the Period under Review

(1) Explanation of Business Results

The Japanese economy during the three months ended March 31, 2020 was expected to face a severe decline in consumption partly due to issuance of a request for self-restraint in unnecessary outings issued by governors/mayors of local governments in order to avoid the collapse of health care systems caused by the coronavirus disease (COVID-19). The financial market is also in a more chaotic situation than that which was seen during the 2008 financial crisis, and prospects for both the Japanese and global economy are uncertain. While pharmaceutical companies are proceeding with the development of drugs and vaccines to treat or prevent the coronavirus disease (COVID-19), it will take some time for these to become viable.

Amid these circumstances, the Company endeavored to increase management efficiency and actively expanded its research, development, and licensing activities. For the purpose of accelerating research and development in the pharmaceutical business, the Company has established OPA Therapeutics Inc. (hereinafter "OPA"), a wholly-owned subsidiary of the Company in April 2020. OPA has its business location in the state of California, the U.S., and will undertake the execution of non-clinical trials. Dr. Frank Tufaro (former Chief Executive Officer of DNAtrix Inc.) who has over 20 years of experience in oncolytic virus research and development, is appointed as President of OPA.

In the pharmaceutical business, the Company promoted research, development, and licensing activities centered on Telomelysin (OBP-301) virotherapy for cancer. In addition, in the diagnostic business, the Company promoted research and development activities centered on TelomeScan (OBP-401). For details of the Company's activities, please refer to "3. Supplemental Information (1) Research and development activities."

As a result, for the three months ended March 31, 2020, net sales were \(\frac{\pmathbf{7}}{7}0,274\) thousand (net sales of \(\frac{\pmathbf{4}}{4}8,383\) thousand in the same period of the previous year), and operating loss was \(\frac{\pmathbf{2}}{2}87,690\) thousand (operating loss of \(\frac{\pmathbf{3}}{3}64,582\) thousand in the same period of the previous year). In addition, the Company recorded interest income of \(\frac{\pmathbf{5}}{5},107\) thousand as non-operating income and interest expenses of \(\frac{\pmathbf{7}}{7}6\) thousand, foreign exchange losses of \(\frac{\pmathbf{1}}{1},669\) thousand, and other items as non-operating expenses. As a result, ordinary loss was \(\frac{\pmathbf{2}}{2}85,059\) thousand (ordinary loss of \(\frac{\pmathbf{3}}{3}59,220\) thousand in the same period of the previous year), and loss was \(\frac{\pmathbf{2}}{2}86,022\) thousand (loss of \(\frac{\pmathbf{3}}{3}60,185\) thousand in the same period of the previous year).

Financial results by segment were as follows.

1) Pharmaceutical business

In the pharmaceutical business, the Company recorded business contract revenue from Okayama University for next generation Telomelysin OBP-702 and joint development revenue from Medigen Biotechnology Corp. (Taiwan; hereinafter "Medigen") for Telomelysin. As a result, net sales were ¥70,274 thousand (net sales of ¥48,383 thousand in the same period of the previous year) and operating loss was ¥99,646 thousand (operating loss of ¥120,369 thousand in the same period of the previous year).

Going forward, the Company will proceed with Good Manufacturing Practice (GMP) and non-clinical trials for clinical trials of OBP-702 while also promoting investigator-initiated clinical trials of Telomelysin (OBP-301), which are in progress overseas.

2) Diagnostic business

In the diagnostic business, the Company is beginning clinical research with Juntendo University to consider prognosis prediction of treatment for circulating tumor cell (CTC) in the blood for patients with lung cancer and proceeded with preparation for automatic CTC test using an AI system, but no net sales were generated. As a result, net sales were zero (net sales of zero in the same period of the previous year) and operating loss was \\$13,034 thousand (operating loss of \\$96,384 thousand in the same period of the previous year).

(2) Explanation of Financial Position

Status of Assets, Liabilities and Net Assets

Assets at the end of the first quarter of the fiscal year under review were ¥3,885,211 thousand (11.3% decline compared with the end of the previous fiscal year), owing partly to a decline in cash and deposits.

Liabilities were ¥719,070 thousand (22.3% decline compared with the end of the previous fiscal year), owing partly to a decline in accounts payable - other. Net assets were ¥3,166,140 thousand (8.3% decline compared with the end of the previous fiscal year), owing to loss incurred and other factors. Additionally, treasury shares of ¥41 thousand acquired through purchase demands from shareholders holding less than one unit were recorded in net assets.

(3) Explanation of Financial Results Forecast and Other Forward-looking Information

Focusing on furthering the development of Telomelysin, the Company actively promotes clinical trials, nonclinical trials, and the manufacture of investigational new drugs for various domestic and international pipelines in order to further improve corporate value and is strengthening efforts to sign license agreements with major pharmaceutical companies both in Japan and overseas. Meanwhile, the Company's base of stable revenue is still small, and financial results fluctuate widely due to factors including contractual lump-sum revenue payments on the signing of new license agreements and development milestone revenue payments generated by events and achievements of partners with license agreements.

Given that there are currently many indeterminate factors that may influence financial results, the Company believes that it is unrealistic to attempt to calculate appropriate and realistic numerical values for the financial results forecast and therefore has not disclosed any forecasts for financial results.

(3) Notes to Quarterly Financial Statements (Notes on going concern assumption)

There is no relevant information.

(Notes in the case of significant changes in shareholders' equity) There is no relevant information.

(Segment information, etc.)

[Segment information]

- I. For three months ended March 31, 2019
 - 1. Information on net sales and profit (loss) by reportable segment

(Thousand yen)

		Reportable segment			Amount recorded
	Pharmaceutical	Diagnostic	Total	Adjustment (Note 1)	in Quarterly Financial
	Business	Business	1900	(=)	Statements (Note 2)
Net sales					
Net sales to outside customers	48,383	_	48,383	_	48,383
Inter-segment net sales or transfers	_	_	_		_
Total	48,383	l	48,383		48,383
Segment loss	(120,369)	(96,384)	(216,754)	(147,828)	(364,582)

- (Notes) 1. The adjustment to segment loss of negative ¥147,828 thousand is a corporate expense that has not been allocated to reportable segments, and is mainly expenses related to administrative departments that do not belong to any reportable segment.
 - 2. Segment loss has been adjusted with operating loss in quarterly financial statements.
- 2. Information on impairment loss of non-current assets or goodwill, etc., for each reportable segment There is no relevant information.
- II. For three months ended March 31, 2020
 - 1. Information on net sales and profit (loss) by reportable segment

(Thousand yen)

		Reportable segment			Amount recorded
	Pharmaceutical Business	Diagnostic Business	Total	Adjustment (Note 1)	in Quarterly Financial Statements (Note 2)
Net sales					(14010-2)
Net sales Net sales to outside customers	70,274	_	70,274	_	70,274
Inter-segment net sales or transfers	_	_	_		_
Total	70,274	-	70,274	1	70,274
Segment loss	(99,646)	(13,034)	(112,681)	(175,009)	(287,690)

- (Notes) 1. The adjustment to segment loss of negative ¥175,009 thousand is a corporate expense that has not been allocated to reportable segments, and is mainly expenses related to administrative departments that do not belong to any reportable segment.
 - 2. Segment loss has been adjusted with operating loss in quarterly financial statements.
- 2. Information on impairment loss of non-current assets or goodwill, etc., for each reportable segment There is no relevant information.

3. Supplemental Information

(1) Research and development activities

Research and development expenses of the Company in the three months ended March 31, 2020 totaled \\$156,053 thousand, including \\$131,142 thousand for the pharmaceutical business, \\$46,039 thousand for the diagnostic business, and \\$18,870 thousand shared by both segments.

Furthermore, the status of research and development activities during the fiscal year under review is as follows.

(1) Research and development structure

As of March 31, 2020, 13 persons belonged to research and development department, equivalent to 43.3% of the total number of employees.

(2) Research and development and business activities

The Company promoted research and development, and business activities centered on the following projects.

(a) Pharmaceutical business

1) Activities related to Telomelysin (OBP-301) virotherapy for cancer

The Company concluded exclusive licensing in Japan and Taiwan of Telomelysin and exclusive option right concerning the worldwide of Telomelysin, excluding Japan, Taiwan, China, Hong Kong and Macau with Chugai Pharmaceutical Co., Ltd. (hereinafter "Chugai") in April 2019. In case Chugai exercise the exclusive option right, the total amount of the license agreement the company receive from Chugai is over ¥50 billion yen, and the company has already received a contractual lump-sum payment and the first milestone revenue payment under these agreements from Chugai.

Currently, four clinical trials are simultaneously in progress for Telomelysin (OBP-301) virotherapy for cancer: i) Phase II clinical trial in combination with radiation therapy for esophageal cancer; ii) Phase I investigator-initiated clinical trial in combination with pembrolizumab, an anti-PD-1 antibody, for solid tumors; iii) Phase II investigator-initiated clinical trial in combination with pembrolizumab, an anti-PD-1 antibody for gastric cancer / gastroesophageal junction cancer; and iv) Phase I sponsor-initiated clinical trial for hepatocellular cancer.

Regarding the above i) "Phase II clinical trial in combination with radiation therapy for esophageal cancer," administration by licensee Chugai to the first patient began in Japan in March 2020. The targeted number of patients to be administered is 37 for esophageal cancer patients refractory to resection through surgery and definitive chemoradiotherapy. According to Chugai's disclosure materials on April 23, 2020, Chugai plan to apply for approval for Telomelysin in 2022.

Regarding the above ii) Phase I investigator-initiated clinical trial in combination with an anti-PD-1 antibody for various types of solid tumors in the process of the development centered on esophageal cancer in combination with pembrolizumab, an anti-PD-1 antibody, administration to patients began in December 2017.

The administration of Phase Ia clinical trials where Telomelysin was administered to the primary tumor of esophagus was completed, and it transitioned to a Phase Ib clinical trial where Telomelysin was administered to the liver metastasis site. As a result of the Phase Ia clinical trial where Telomelysin was administered to the primary tumor of esophagus, the safety of Telomelysin in combination with pembrolizumab, an anti-PD-1 antibody, was shown, and it was reported that systemic partial responses (PR) were observed in 3 out of 9 patients. For the Phase Ib clinical trial currently in progress, enrollment of 9 among the targeted 13 patients was completed. After compiling intermediate data by the end of 2020, the possibility of transition to sponsorinitiated clinical trials will be considered.

Regarding the above iii) "Phase II investigator-initiated clinical trial in combination with pembrolizumab, an anti-PD-1 antibody for gastric cancer / gastroesophageal junction cancer" at Cornell University in the U.S., administration to the first patient began in May 2019. It will be administered to up to 37 patients, and an evaluation of the efficacy and safety of Telomelysin and pembrolizumab, an anti-PD-1 antibody, will be performed. The Company aims to make considerations based on a progress report on around 10 patients during 2020.

Regarding the above iv) Phase I sponsor-initiated clinical trial for hepatocellular cancer, administration of the final case was completed in April 2020 with Pusan National University (South Korea) and National Taiwan University (Taiwan) as trial sites. Going forward, the Company will compile the data and direct a future policy

by the end of 2020.

Furthermore, in the U.S., the Company is preparing for beginning Phase I investigator-initiated clinical trials on combination radiotherapy for esophageal cancer and Phase II investigator-initiated clinical trials combining the anti-PD-1 antibody and radiation therapy for head and neck cancer. In addition, the Company has been conducting non-clinical trials for breast cancer.

Jiangsu Hengrui Medicine Co., Ltd., (hereinafter "Hengrui") a licensee of research, development, manufacturing, and sales rights of Telomelysin in China, Hong Kong, and Macau, has established Good Manufacturing Practice (GMP) for Telomelysin and conducted pre-IND in October 2019, and is preparing to apply to the Chinese government (National Medical Products Administration: NMPA) to conduct clinical trials.

2) Activities related to next generation Telomelysin (OBP-702)

OBP-702, an oncolytic gene therapy, has two anti-tumor effects which combine the "gene therapy" of the p53 cancer suppressor gene with the "oncolytic functions" of Telomelysin (OBP-301). The Company positions OBP-702 as the "next generation Telomelysin" to follow Telomelysin itself, which has already been licensed to Chugai and Hengrui. In addition, a research group led by Professor Fujiwara of Okayama University conducted non-clinical trials on OBP-702 which was adopted as a grant program of the Japan Agency for Medical Research and Development (AMED) in April 2017 and March 2020, reporting on results of those trials at several conferences. The Company will proceed with GMP and non-clinical trials on OBP-702 and aims to begin clinical trials by 2022.

3) Other activities related to the pharmaceutical business

Regarding OBP-801, a histone deacetylase (HDAC) inhibitor licensed from Astellas Pharma Inc. in 2009, dose limiting toxicity was observed in Phase I clinical trials in the U.S., and thus, at present, study enrollment of new patients has been tentatively suspended and the Company is considering the possibility of restarting with another protocol including combinations with other drugs. Furthermore, the Company applied for a patent concerning the ophthalmic field as a new area of indication for OBP-801 in July 2018 with an ophthalmology research group from Kyoto Prefectural University of Medicine and is continuing to conduct joint research with them.

Regarding the novel anti-HIV drug, OBP-601 (Censavudine), given the current supersaturation status of the HIV market, the circumstances surrounding the possibility of new licenses being issued in the infection field are extremely harsh. Currently, the Company is actively working on business activities for concluding any new license agreements on OBP-601 in fields other than the infection field. However, if it is determined that it would be impossible to enter into any new license agreements, the Company will return rights for OBP-601 to Yale University, and proceed forward with the selection and concentration of pipeline products for effective utilization of management resources.

Regarding the project of OBP-AI-004, an antiviral agent, the Company intends to move forward with joint research with an antiviral agent research group from Kagoshima University with a view toward application development in infection fields other than the hepatitis B virus (HBV).

The status of clinical trials in the Pharmaceutical Business is as follows.

Development code	Trademark or name	Indication	Development region	Development stage
			Japan	Phase II
		Esophageal cancer (solid tumor) In combination with anti-PD-1 antibody	Japan	Phase I
OBP-301		Esophageal cancer In combination with radiation therapy and chemotherapy	U.S.	Phase I (in preparation)
		Gastric / gastroesophageal junction cancer In combination with anti- PD-1 antibody	U.S.	Phase II
		Head and neck cancer In combination with anti- PD-1 antibody and radiation therapy	U.S.	Phase II (in preparation)
		НСС	South Korea and Taiwan	Phase I
OBP-801	HDAC inhibitor	Various types of solid tumor	U.S.	Phase I
OBP-601	Censavudine (anti-HIV drug)	HIV infection	Europe, the U.S. and others	Phase IIb (complete)

(b) Diagnostic business

Regarding TelomeScan, a cancer detection drug, an investor-initiated clinical research is underway for circulating tumor cell (CTC) in the blood in the field of lung cancer with Juntendo University. In addition, for applications in the field of female-specific cancer, the Company will launch a more accurate CTC testing system with detection for human papillomavirus genes from CTC of patients with cervical cancer. Liquid Biotech USA, Inc. (the U.S.), to which rights were granted in the North American territory, is proceeding with joint research activities with universities and research institutions in the U.S., and will establish a joint structure to acquire wider markets together with the Company.

In the future, the Company aims to launch an automated CTC detection system using AI, and achieve an "improvement of throughput" and "standardization of test quality". Furthermore, the Company will enable not only detection of CTC by using TelomeScan but also gene testing for detected cells, with a vision to upgrade its testing system to provide treatment options for patients with cancer.
